pap+ strips

Based on our clinically proven instant whitening formula, the PAP+ Strips are now the perfect way to whiten on the go, sensitivity-free. With 14 strips, you can conveniently whiten wherever you are with fast results in just 30 minutes.

Key points

- Pain-free, sensitivity-free whitening
- Fast results in just a 30 minute application
- Pocket-size and travel friendly for whitening wherever you are
- Use whenever you like for a boost in whitening results
- Residue-free formula for no post-whitening mess

Directions

Dry teeth thoroughly before use. Peel off long strip and apply sticky side to top teeth. Press strip down firmly and fold over back of teeth to secure. Repeat for short strip on bottom teeth. Allow 30 minutes for whitening treatment. Remove strips.

Routine

Use as often as you'd like for a sensitivity-free whitening boost to your smile.

Take your strips with you wherever you go and use them when needed for convenient whitening on the go.

v34 colour corrector

V34 utilises colour correcting technology to improve the appearance of tooth colour. The formulation consists of two water soluble dyes that form a deep violet tone.

This Focus Range product applies the complementary hue to your tooth shade, effectively neutralising yellow tones/ stains on the tooth surface. It can be used as a brightening booster in addition to your normal toothpaste for a brighter smile daily.

Key points

- Non-invasive whitening method
- Neutralise warm tones to produce a brighter smile
- Conceals stains to make teeth appear brighter
- Non-abrasive formula with gentle ingredients that don't trigger sensitivity or gum irritation
- Does not replace your toothpaste, ensure you brush your teeth with toothpaste prior to use

The instant whitening wand

Glostik is a pearlescent tooth gloss designed to make your teeth instantly whiter for a picture-perfect glow.

- Easy on-the-go application
- Instantly whiter teeth
- Brightening & glowing effect

How does Glostik work?

Similar to lip gloss, tooth gloss works by reflecting light to make your teeth appear whiter and give your smile the glow it deserves. The pearlescent glossing formula that covers your teeth creates an instant whitening effect.

How and when should I use Glostik?

Before use, thoroughly dry teeth. Apply a thin layer of Glostik from top to bottom on each tooth, using long, even strokes. Once applied to all teeth, close mouth to smooth the product evenly across the teeth. Glostik can be reapplied as needed and used as often as desired. It is perfect for on-the-go touch-ups and getting ready for special events!

Your smile's finishing touch

Experience the ultimate finishing touch to every look with Hismile's Glostik. Wearing Glostik makes your smile look instantly full-of-life, with a white, glossy finish.

Can Hismile's Glostik be used with veneers, caps, implants, bridges, or bonded teeth?

There are no ingredients that would compromise the integrity of veneers, caps, implants, bridges or bonded teeth, and Glostik would make them appear whiter and glossier. However, we always advise checking with your dentist before using, to ensure it is a suitable product for you.
